NFPA® 79

Electrical Standard for Industrial Machinery

2015 Edition

NFPA, 1 Batterymarch Park, Quincy, MA 02169-7471
An International Codes and Standards Organization
IMPORTANT NOTICES AND DISCLAIMERS CONCERNING NFPA® STANDARDS

NOTICE AND DISCLAIMER OF LIABILITY CONCERNING THE USE OF NFPA STANDARDS

NFPA® codes, standards, recommended practices, and guides (“NFPA Standards”), of which the document contained herein is one, are developed through a consensus standards development process approved by the American National Standards Institute. This process brings together volunteers representing varied viewpoints and interests to achieve consensus on fire and other safety issues. While the NFPA administers the process and establishes rules to promote fairness in the development of consensus, it does not independently test, evaluate, or verify the accuracy of any information or the soundness of any judgments contained in NFPA Standards.

The NFPA disclaims liability for any personal injury, property or other damages of any nature whatsoever, whether special, indirect, consequential or compensatory, directly or indirectly resulting from the publication, use of, or reliance on NFPA Standards. The NFPA also makes no guaranty or warranty as to the accuracy or completeness of any information published herein.

In issuing and making NFPA Standards available, the NFPA is not undertaking to render professional or other services for or on behalf of any person or entity. Nor is the NFPA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances.

The NFPA has no power, nor does it undertake, to police or enforce compliance with the contents of NFPA Standards. Nor does the NFPA list, certify, test, or inspect products, designs, or installations for compliance with this document. Any certification or other statement of compliance with the requirements of this document shall not be attributable to the NFPA and is solely the responsibility of the certifier or maker of the statement.

REMINDER: UPDATING OF NFPA STANDARDS

Users of NFPA codes, standards, recommended practices, and guides (“NFPA Standards”) should be aware that NFPA Standards may be amended from time to time through the issuance of Tentative Interim Amendments or corrected by Errata. An official NFPA Standard at any point in time consists of the current edition of the document together with any Tentative Interim Amendment and any Errata then in effect.

In order to determine whether an NFPA Standard has been amended through the issuance of Tentative Interim Amendments or corrected by Errata, visit the Document Information Pages on NFPA’s website. The Document Information Pages provide up-to-date, document specific information including any issued Tentative Interim Amendments and Errata.

To access the Document Information Page for a specific NFPA Standard, go to http://www.nfpa.org/docinfo to choose from the list of NFPA Standards or use the search feature on the right to select the NFPA Standard number (e.g., NFPA 101). In addition to posting all existing Tentative Interim Amendments and Errata, the Document Information Page also includes the option to sign-up for an “Alert” feature to receive an email notification when new updates and other information are posted regarding the document.
IMPORTANT NOTICES AND DISCLAIMERS CONCERNING NFPA® STANDARDS

ADDITIONAL NOTICES AND DISCLAIMERS

Updating of NFPA Standards

Users of NFPA codes, standards, recommended practices, and guides (“NFPA Standards”) should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of Tentative Interim Amendments or corrected by Errata. An official NFPA Standard at any point in time consists of the current edition of the document together with any Tentative Interim Amendments and any Errata then in effect. In order to determine whether a given document is the current edition and whether it has been amended through the issuance of Tentative Interim Amendments or corrected through the issuance of Errata, consult appropriate NFPA publications such as the National Fire Codes® Subscription Service, visit the NFPA website at www.nfpa.org, or contact the NFPA at the address listed below.

Interpretations of NFPA Standards

A statement, written or oral, that is not processed in accordance with Section 6 of the Regulations Governing the Development of NFPA Standards shall not be considered the official position of NFPA or any of its Committees and shall not be considered to be, nor be relied upon as, a Formal Interpretation.

Patents

The NFPA does not take any position with respect to the validity of any patent rights referenced in, related to, or asserted in connection with an NFPA Standard. The users of NFPA Standards bear the sole responsibility for determining the validity of any such patent rights, as well as the risk of infringement of such rights, and the NFPA disclaims liability for the infringement of any patent resulting from the use of or reliance on NFPA Standards.

NFPA adheres to the policy of the American National Standards Institute (ANSI) regarding the inclusion of patents in American National Standards (“the ANSI Patent Policy”), and hereby gives the following notice pursuant to that policy:

NOTICE: The user’s attention is called to the possibility that compliance with an NFPA Standard may require use of an invention covered by patent rights. NFPA takes no position as to the validity of any such patent rights or as to whether such patent rights constitute or include essential patent claims under the ANSI Patent Policy. If, in connection with the ANSI Patent Policy, a patent holder has filed a statement of willingness to grant licenses under these rights on reasonable and nondiscriminatory terms and conditions to applicants desiring to obtain such a license, copies of such filed statements can be obtained, on request, from NFPA. For further information, contact the NFPA at the address listed below.

Law and Regulations

Users of NFPA Standards should consult applicable federal, state, and local laws and regulations. NFPA does not, by the publication of its codes, standards, recommended practices, and guides, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

Copyrights

NFPA Standards are copyrighted. They are made available for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of safe practices and methods. By making these documents available for use and adoption by public authorities and private users, the NFPA does not waive any rights in copyright to these documents.

Use of NFPA Standards for regulatory purposes should be accomplished through adoption by reference. The term “adoption by reference” means the citing of title, edition, and publishing information only. Any deletions, additions, and changes desired by the adopting authority should be noted separately in the adopting instrument. In order to assist NFPA in following the uses made of its documents, adopting authorities are requested to notify the NFPA (Attention: Secretary, Standards Council) in writing of such use. For technical assistance and questions concerning adoption of NFPA Standards, contact NFPA at the address below.

For Further Information

All questions or other communications relating to NFPA Standards and all requests for information on NFPA procedures governing its codes and standards development process, including information on the procedures for requesting Formal Interpretations, for proposing Tentative Interim Amendments, and for proposing revisions to NFPA standards during regular revision cycles, should be sent to NFPA headquarters, addressed to the attention of the Secretary, Standards Council, NFPA, 1 Batterymarch Park, P.O. Box 9101, Quincy, MA 02269-9101; email: stds_admin@nfpa.org

For more information about NFPA, visit the NFPA website at www.nfpa.org. All NFPA codes and standards can be viewed at no cost at www.nfpa.org/freeaccess.
Origin and Development of NFPA 79

In September 1941, the metalworking machine tool industry wrote its first electrical standard to make machine tools safer to operate, more productive, and less costly to maintain, and to improve the quality and performance of their electrical components. That particular standard served as an American “War Standard.”

To study the special electrical problems involved with machine tools, in 1941 the Electrical Section of the National Fire Protection Association sanctioned a Special Subcommittee on Wiring, Overcurrent Protection, and Control of Motor-Operated Machine Tools. This subcommittee, cooperating with machine tool builders, manufacturers of control equipment, and Underwriters Laboratories Inc., conducted tests and investigated the peculiar conditions involved with machine tools that might warrant exception to certain specific National Electrical Code® requirements. This investigation resulted, on August 4, 1942, in a Tentative Interim Amendment and first appeared in a 1943 supplement to the 1940 edition of the National Electrical Code® as Article 670, “Machine Tools.” It remained essentially unchanged through the 1959 edition.

Meanwhile, manufacturers of other types of industrial equipment erroneously began to follow the specialized practices permitted by Article 670. Late in 1952, a Technical Subcommittee on Fundamentals of Electrically Operated Production Machinery and Material Handling and Processing Equipment for Fixed Locations was organized to attempt to group the special requirements of this broad field into one article. The extremely broad scope introduced so many problems that, in December 1956, this technical subcommittee was reorganized into an NFPA committee whose scope was limited to machine tools and whose objective was the preparation of this NFPA standard with corresponding revisions in Article 670 in the National Electrical Code.

Modern machine tool electrical equipment may vary from that of single-motor machines, such as drill presses, that perform simple, repetitive operations, to that of very large, multimotored automatic machines that involve highly complex electrical control systems, including electronic and solid-state devices and equipment. Generally these machines are specially designed, factory wired, and tested by the builder and then erected in the plant in which they will be used. Because of their importance to plant production and their usually high cost, they are customarily provided with many safeguards and other devices not often incorporated in the usual motor and control application as contemplated by the National Electrical Code.

Although these machines may be completely automatic, they are constantly attended, when operating, by highly skilled operators. The machine usually incorporates many special devices to protect the operator, protect the machine and building against fires of electrical origin, protect the machine and work in process against damage due to electrical failures, and protect against loss of production due to failure of a machine component. To provide these
safeguards, it may be preferable to deliberately sacrifice a motor or some other component, rather than to chance injury to the operator, the work, or the machine. It is because of such considerations that this standard varies from the basic concepts of motor protection as contained in the National Electrical Code.

As NFPA 79 evolved, it became apparent that certain classes of light industrial machinery (e.g., small drill presses, bench grinders, sanders, etc.) were not appropriately covered. The 1977 edition of the standard recognized this problem and purposely excluded tools powered by 2 hp or less.

Subsequent to publication of the 1977 standard, a light industrial machinery standard development activity was initiated by the Power Tool Institute. The 1985 edition of NFPA 79 reflects this activity, and appropriate requirements are now included in the standard.

In 1975, the Society of the Plastics Industry requested that this standard be enlarged in scope to include plastics machinery. A formal request was received by NFPA in September 1978, and, through the combined efforts of the NFPA 79 committee and representatives of the Society of the Plastics Industry, the scope was broadened to include such machinery in the 1980 edition.

In June 1981, the Joint Industrial Council (JIC) Board of Directors acknowledged the dated state of the electrical and electronic standards and requested that NFPA 79 incorporate its standard the material and topics covered by the JIC electrical (EMP-1-67, EGP-1-67) and electronic (EL-1-71) standards with the intention that the JIC standards eventually would be declared superseded. The NFPA Standards Council approved the request with the stipulation that the material and topics incorporated from the JIC standards be limited to areas related to electrical shock and fire hazards. The 1985 edition reflected the incorporation of the appropriate material from the JIC electrical (EMP-1-67, EGP-1-67) standards not previously covered. The 1991, 1994, and 1997 editions included additional references to international standards and reflected the committee’s efforts in harmonization.

The 2002 edition was a major rewrite and represented a significant and historic effort in harmonizing an existing NFPA standard with an existing IEC standard. Major changes for this edition included renumbering section and chapter numbers to align with IEC 60204-1. A new chapter was added to address testing. An informative Annex A was added to assist the user in understanding the mandatory text portion of the standard, and a new annex, Annex H, was added to assist the user with cross-references to previous edition section numbers.

To better coordinate its work, this committee reports to the Association through the Correlating Committee of the National Electrical Code Committee. The primary reason is to correlate this standard and the National Electrical Code, especially with respect to Article 670.

The 2007 edition continued to be aligned with IEC 60204-1. Because so much electrical equipment today contains both electrical and electronic equipment, Chapter 11, Electronic Equipment, was deleted, and any sections that remained applicable were dispersed to the appropriate chapters. The deletion of Chapter 11 caused all chapters after Chapter 11 to be renumbered to one less than in previous editions. A new Chapter 19, entitled “Servo Drives and Motors,” was added to the end of the standard. This new chapter addressed some of the user concerns that are arising as servo drives and servo motors are integrated into industrial machinery. Other changes include further defining of cables and cords, clarifying emergency stop functions, permitting system isolation equipment, clarifying short-circuit current markings, and refining requirements associated with software- and firmware-based control systems performing safety-related functions.

Changes to the 2012 edition continued to align the standard with IEC 60204-1. Due to the continued advancement and expansion of wireless and cableless technology, major changes for this edition included a revised definition for the term cableless control and a new definition for the term cableless operator control station, along with revisions to Chapter 9, which aligned with IEC 60204-1. The title of Chapter 6 was changed, to recognize that there are other hazards (such as arc flash and stored energy) besides electrical shock. New sections were added to Chapters 6 and 16 to recognize these hazards and correlate with NFPA 70E. Furthermore, the sections on the hazards from stored energy in Chapter 7 were moved to Chapter 6 for clarity and proper location of those rules in the document. To align with the NEC, the requirements in 7.2.10 were changed for selecting overcurrent devices for motors. Chapter 12 received a new section to address user concerns permitting the use of appliance wiring material (AWM) as special cables, with clarifications on determining suitability for use under specific conditions. An important addition of a 90°C (194°F) temperature column to the conductor ampacity table in Chapter 12 was included to correlate with the NEC.

Other changes included adding the definition for short-circuit current rating (SCCR), extracted from the NEC, revising the definition for equipment grounding conductor; and adding a new definition for safety-related function specific to industrial machines to harmonize with IEC and ISO standards. Further changes to Chapter 19 addressed some of the user concerns arising from servo drives and servo motors being more commonly used in industrial machinery. Adding ANSI indications to the appropriate UL referenced publications in several sections, Chapter 2, and Annex J provided consistency. Finally, adding an American Wire Gauge (AWG) to the metric conductor cross-reference table in Annex I provided the user and enforcement officials a means to judge AWG versus metric wire sizes required by the standard.

As in previous editions, the 2015 edition aligns with IEC 60204-1, and now the alignment is more intuitive and informative. Parenthetical terms that have always aligned with IEC terms throughout the main body of the document, but without explanation, now reside in Annex J along with further explanation for their use. Global changes of the editorial type have been accepted to comply with the Manual of Style for NFPA Technical Committee Documents. Two definitions have been added — industrial control panel, and overcurrent protective device, branch circuit. Seven definitions
have been deleted — cable trunking systems (3.3.16), duct (3.3.33), earth (3.3.34), positive opening operation (of a contact element) (3.3.74), protective bonding circuit (3.3.77), protective conductor (3.3.78), and subassembly (3.3.98). The title of Section 6.6 has been revised to “Arc Flash Hazard Warning” to clarify that the requirement is to warn, not to protect, qualified individuals of a potential arc flash hazard. This change aligns with the 2014 NEC revision to 110.16, which adds “or factory” to allow the required arc-flash warning label to be applied at the factory as well as in the field — a step that is more conducive to industrial machinery and industrial control panels.

The conditions for emergency stop on Category 1 and Category 0 have been revised, as well as those for emergency switching off. Working space rules for enclosures that contain supply conductors have been revised to clarify that 110.26 of the NEC applies, and an exhibit has been added to Annex A to illustrate the requirement. The requirement for width of the working space has also been revised to specify the opening into the control cabinet and to consider situations where there were devices involved with industrial machine control cabinets. Table 12.5.5(a) has been revised to add a 60 and 90 degree column, to correlate with the addition of a 90 degree column to 12.5.1 in the 2012 edition, and with the NEC. Finally, language has been revised to clarify the rules for separate supply sources; what standard is to be used for warning signs; how to calculate SCCR marking where there are multiple control panels; that overcurrent protection is required for servo drives; and that conveyors, conveying machines, and material handling machines are within the scope of NFPA 79.

As always, users of this standard are encouraged to submit public input to improve the standard as we go forward with the new 2018 edition of NFPA 79, Electrical Standard for Industrial Machinery.
Correlating Committee on National Electrical Code®

Michael J. Johnston, Chair
National Electrical Contractors Association, MD [IM]

Mark W. Earley, Secretary
National Fire Protection Association, MA

Kimberly L. Shea, Recording Secretary
National Fire Protection Association, MA

James E. Brunssen, Telcordia, NJ [UT]
  Rep. Alliance for Telecommunications Industry Solutions

Merton W. Bunker, Jr., U.S. Department of State, VA [U]

William R. Drake, Actuant Electrical, CA [M]

William T. Fiske, Intertek Testing Services, NY [RT]

Palmer L. Hickman, National Joint Apprentice & Training Committee, MD [L]
  Rep. International Brotherhood of Electrical Workers

David L. Hittinger, Independent Electrical Contractors of Greater Cincinnati, OH [IM]

Daniel J. Kissane, Legrand/Pass & Seymour, NY [M]
  Rep. National Electrical Manufacturers Association

John R. Kovacik, UL LLC, IL [RT]

Neil F. LaBrake, Jr., National Grid, NY [UT]
  Rep. Electric Light & Power Group/EEI

Danny Liggett, The DuPont Company, Inc., TX [U]
  Rep. American Chemistry Council

Richard P. Owen, Oakdale, MN [E]
  Rep. International Association of Electrical Inspectors

Alternates

Thomas L. Adams, Engineering Consultant, IL [UT]
  (Alt. to N. F. LaBrake, Jr.)

Lawrence S. Ayer, Biz Com Electric, Inc., OH [IM]
  (Alt. to D. L. Hittinger)

James T. Dollard, Jr., IBEW Local Union 98, PA [L]
  (Alt. to P. L. Hickman)

Stanley J. Folz, Morse Electric Company, NV [IM]
  (Alt. to M. J. Johnston)

Ernest J. Gallo, Telcordia Technologies, Inc., NJ [UT]
  (Alt. to J. E. Brunssen)

Alan Manche, Schneider Electric, KY [M]
  (Alt. to W. R. Drake)

Robert A. McCullough, Tuckerton, NJ [E]
  (Alt. to R. P. Owen)

Michael E. McNiel, FMC Bio Polymer, ME [U]
  (Alt. to D. Liggett)

Mark C. Ode, UL LLC, AZ [RT]
  (Alt. to J. R. Kovacik)

James F. Pierce, Intertek, OR [RT]
  (Alt. to W. T. Fiske)

Vincent J. Saporita, Eaton’s Bussmann Business, MO [M]
  (Alt. to D. J. Kissane)

Nonvoting

Richard G. Biermann, Biermann Electric Company, Inc., IA [IM]
  (Member Emeritus)

Timothy J. Pope, Canadian Standards Association, Canada [SE]
  Rep. CSA/Canadian Electrical Code Committee

Mark W. Earley, NFPA Staff Liaison

This list represents the membership at the time the Committee was balloted on the final text of this edition. Since that time, changes in the membership may have occurred. A key to classifications is found at the back of the document.

NOTE: Membership on a committee shall not in and of itself constitute an endorsement of the Association or any document developed by the committee on which the member serves.

Committee Scope: This Committee shall have primary responsibility for documents on minimizing the risk of electricity as a source of electric shock and as a potential ignition source of fires and explosions. It shall also be responsible for text to minimize the propagation of fire and explosions due to electrical installations.
Technical Committee on Electrical Equipment of Industrial Machinery

Mark R. Hilbert, Chair
MR Hilbert Electrical Inspections & Training, NH [E]

2015 Edition
NFPA 79
Electrical Standard for
Industrial Machinery
2015 Edition

IMPORTANT NOTE: This NFPA document is made available for use subject to important notices and legal disclaimers. These notices and disclaimers appear in all publications containing this document and may be found under the heading “Important Notices and Disclaimers Concerning NFPA Documents.” They can also be obtained on request from NFPA or viewed at www.nfpa.org/disclaimers.

NOTICE: An asterisk (*) following the number or letter designating a paragraph indicates that explanatory material on the paragraph can be found in Annex A.

A reference in brackets [ ] following a section or paragraph indicates material that has been extracted from another NFPA document. As an aid to the user, the complete title and edition of the source documents for extracts in mandatory sections of the document are given in Chapter 2 and those for extracts in informational sections are given in Annex K. Extracted text may be edited for consistency and style and may include the revision of internal paragraph references and other references as appropriate. Requests for interpretations or revisions of extracted text shall be sent to the technical committee responsible for the source document.

Information on referenced publications can be found in Chapter 2 and Annex K.

Chapter 1  Administration

1.1* Scope.

The provisions of this standard shall apply to the electrical/electronic equipment, apparatus, or systems of industrial machines operating from a nominal voltage of 600 volts or less, and commencing at the point of connection of the supply circuit conductors to the electrical equipment of the machine.

1.1.2* This standard does not include the additional requirements for machines intended for use in hazardous (classified) locations.

1.2 Purpose. This standard shall provide detailed information for the application of electrical/electronic equipment, apparatus, or systems supplied as part of industrial machines that will promote safety to life and property.

1.3 Application.

1.3.1 This standard is not intended to be applied retroactively.

1.3.2 When changes other than repairs are made to machines that do not comply with the provisions of this standard, the changes shall conform to the provisions of this standard.

1.3.3 This standard shall not apply to the following:

(1) Fixed or portable tools judged under the requirements of a testing laboratory acceptable to the authority having jurisdiction

(2) Machines used in dwelling units

1.4 Specific Provisions Other Than 79. The size and overcurrent protection of the supply conductors to a machine shall be covered by Article 670 of NFPA 70. The wiring between component machines of an industrial manufacturing system shall be covered by NFPA 70.

Exception: Wiring of component machines of an industrial manufacturing system that is supplied by the manufacturer and is an integral part of the system, is adequately protected and supported, and meets the requirements of this standard.

1.5* Specific Provisions Not Made in Relation to NFPA 70. On any point for which specific provisions are not made in this standard the provisions of NFPA 70 shall be observed.

1.6 State of the Art. This standard shall not limit or inhibit the advancement of the state of the art. Each type of machine has unique requirements that shall be accommodated to provide adequate safety.

Chapter 2  Referenced Publications

2.1 General. The documents or portions thereof listed in this chapter are referenced within this standard and shall be considered part of the requirements of this document.

2.2 NFPA Publications. National Fire Protection Association, Batterymarch Park, Quincy, MA 02169-7471.

2.3 Other Publications.

2.3.1 ANSI Publications. American National Standards Institute, Inc., 25 West 43rd Street, 4th Floor, New York, NY 10036.

2.3.2 ASTM Publications. ASTM International, 100 Barr Harbor Drive, P. O. Box C700, West Conshohocken, PA 19428-2959.

2.3.3 IEC Publications. International Electrotechnical Commission, 3, rue de Varembe, P.O. Box 131, CH-1211 Geneva 20, Switzerland.

IEC 60072–1, Dimensions and output series for rotating electrical machines — Part 1: Frame numbers 56 to 400 and flange numbers 55 to 1080, 1991-03.

IEC 60072–2, Dimensions and output series for rotating electrical machines — Part 2: Frame numbers 355 to 1000 and flange numbers 1180 to 2360, 1996-12.

2.3.4 IEEE Publications. IEEE, Three Park Avenue, 17th Floor, New York, NY 10016-5997.
